

# II<sup>nd</sup> level Master in Petroleum Geoscience

The **University of Basilicata**, in cooperation with **Shell Italia E&P** and **Total E&P Italia**, promotes a one-year Master course on Petroleum Geoscience. The course covers a wide range of subjects in the geoscience by integrating the research-based expertise of the academic world with the methods and practices of the modern petroleum industry. The goal is to prepare young and motivated graduates to enter in the petroleum business, and allied service industries, as experts of hydrocarbon production. Specifically, the course is designed for those willing to gain a new knowledge for the **development of producing oil fields**.

The Master course will be taught in **Potenza** by a selected staff from Italian and foreign universities, and scientific and technical personnel of Shell Italia E&P and Total E&P Italia. An **internship activity** with the two supporting companies will take place at the end of lectures and seminars.

**Potential candidates** should possess a Laurea Magistrale (second level degree in the 3+2 system) in **Geoscience**, Mining, Petroleum, Environmental Engineering, or an equivalent foreign degree.

The **maximum number** of accepted participants per year will be 20. The **deadline for application** is November 5, 2013. **Participation fees** are fixed at 3,000 euros.
